Glow Strip

This effect makes parts of an image glow brighter by working on the luminance channel of an image. The *Glow* is the superposition of the base image and a modified version, where bright areas are blurred.

To “animate” the glow effect, mix it with the base image using the Gamma Cross effect, crossing from the base image to the glowing one.

Options

Threshold

Areas brighter than the *Threshold* are blurred.

Clamp

The maximum luminosity that is added.

Boost Factor

Multiplier of the brightness.

Blur Distance

The size of the blur.

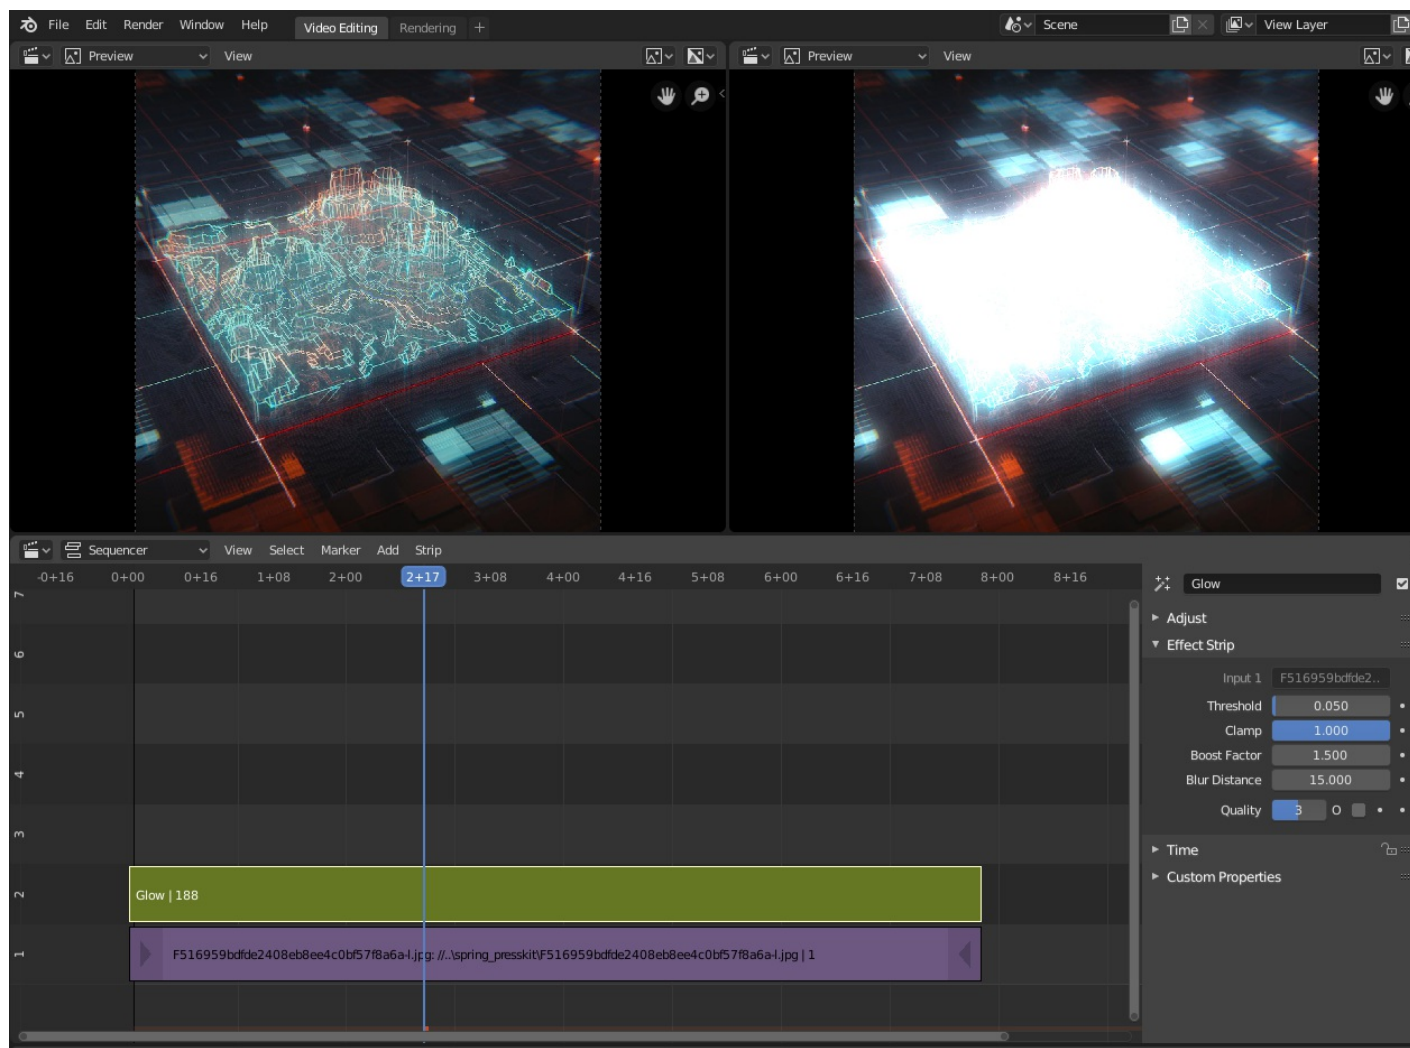

Quality

Improves the quality of the glow by giving smoother results but will be slower.

Only Boost

This checkbox allows you to only show/use the “modified” version of the image, without the base one.

Example

Glow effect.
