Beztriple Interpolation Easing Items

AUTO:

Automatic Easing.

Easing type is chosen automatically based on what the type of interpolation used (e.g. Ease In for transitional types, and Ease Out for dynamic effects).

EASE_IN:

Ease In.

Only on the end closest to the next keyframe.

EASE_OUT:

Ease Out.

Only on the end closest to the first keyframe.

EASE_IN_OUT:

Ease In and Out.

Segment between both keyframes.
