# Default Keymap

While this isn't a comprehensive list, this page shows common keys used in Blender's default keymap.

## Global Keys

Ctrl - O	Open file.
Ctrl - S	Save file.
Ctrl - N	New file.
Ctrl - Z	Undo.
Shift - Ctrl - Z	Redo.
Ctrl - Q	Quit.
F1	Help ( <i>context sensitive</i> ).
F2	Rename active item
F3	<a href="#">Menu Search</a> .
F4	File context menu.
F5 - F8	<i>Reserved for user actions.</i>
F9	<a href="#">Adjust Last Operation</a> .
F10	<i>Reserved for user actions.</i>
F11	Show render window.
F12	Render the current frame.
Q	Quick access (favorites).
Ctrl - Spacebar	Toggle Maximize <a href="#">Area</a> .
Ctrl - PageUp / Ctrl - PageDown	Next/previous <a href="#">Workspace</a> .
Spacebar	User configurable; see <a href="#">Spacebar Action</a> .
Shift - Ctrl - Spacebar	Playback animation (reverse).

## Common Editing Keys

X	Delete the selected item with a confirmation dialog.
Delete	Delete the selected item without a confirmation dialog.

## Common Editor Keys

These keys are shared across editors such as the 3D Viewport, UV and Graph editor.

A	Select all.
Alt - A /	Select none.
Double-tap A	

<code>Ctrl - I</code>	Invert selection.
<code>H</code>	Hide selected items.
<code>Shift - H</code>	Hide unselected items.
<code>Alt - H</code>	Reveal hidden items.
<code>T</code>	Toggle Toolbar.
<code>N</code>	Toggle Sidebar.

3D Viewport Keys

<code>Tab</code>	Toggle Edit mode.
<code>Ctrl - Tab</code>	Toggle Pose mode for armatures, or show a <a href="#">mode</a> switching pie menu for others.
<code>1 - 3</code>	In Edit Mode, switch between editing vertices ( <code>1</code> ), edges ( <code>2</code> ), or faces ( <code>3</code> ). Hold <code>Shift</code> to toggle one of these without disabling the others. Hold <code>Ctrl</code> to alter how the selection is transformed from the old mode to the new. See <a href="#">Mesh Selection Modes</a> for details.
<code>AccentGrave</code>	Show 3D Viewport navigation pie menu.
<code>Ctrl - AccentGrave</code>	Toggle gizmos.
<code>Shift - AccentGrave</code>	Start <a href="#">Fly/Walk Navigation</a> .

Platform Specific Keys

macOS

The `Cmd` key can be used instead of `Ctrl` on macOS for all but a few exceptions which conflict with the operating system.

List of additional macOS specific keys:

<code>Cmd - Comma</code>	Preferences.
--------------------------	--------------
