BMesh Geometry Utilities (bmesh.geometry)

This module provides access to bmesh geometry evaluation functions.

`bmesh.geometry.intersect_face_point(face, point)`

Tests if the projection of a point is inside a face (using the face's normal).

PARAMETERS:

- **face** (`bmesh.types.BMFace`) – The face to test.
- **point** (*float triplet*) – The point to test.

RETURNS:

True when the projection of the point is in the face.

RETURN TYPE:

bool
