Instance Rotation Node

The *Instance Rotation* outputs the XYZ [Euler](#) rotation of each top-level instance in the local space of the modifier object.

The [Instances](#) page contains more information about geometry instances.

Note

Though rotations are often displayed in units of degrees in the spreadsheet or node editor, they are stored internally in radians, so this node outputs radians.

Inputs

This node has no inputs.

Properties

This node has no properties.

Outputs

Rotation

Vector that indicates the rotation of each top-level instance in radians.
