

# Render Properties

Reference
<b>Panel:</b> Properties ▸ Render ▸ Freestyle

Freestyle can be activated with the checkbox in the header of the Freestyle panel in the *Render* tab.

Freestyle Render Properties.

## Line Thickness Mode

There are two different modes for defining the base line thickness:

### Absolute:

The line thickness is given by a user-specified number of pixels.

### Relative:

The unit line thickness is scaled by the proportion of the present vertical image resolution to 480 pixels. For instance, the “unit line thickness is 1.0 when the image height set to 480px, 1.5 with 720px and 2.0 with 960px.

## Line Thickness

Line thickness to use for rendering (only for *Absolute* line thickness).
