Set Face Set Node

The *Set Face Set* node controls which [face set](#) that faces are in.

The input node for this data is the [Face Set Node](#).

Note

This node can only be used in the [Tool context](#).

Inputs

Mesh

Standard geometry input.

Selection

Boolean field that controls which faces will have the Face Set value applied.

Face Set

Integer field for specifying which face set each selected face should be moved to. Ignored for faces where the value of Selection is false.

Properties

This node has no properties.

Outputs

Mesh

Standard geometry output.
