Invert Matrix Node

Returns the [inverse](#) of the given matrix.

Inputs

Matrix

The matrix to invert.

Properties

This node has no properties.

Outputs

Matrix

The inverted matrix.

Invertible

Returns whether the matrix could be inverted. This can be false when a transformation matrix has a scale of zero, for example. See [Invertible matrix](#) for more information.

Important

When a matrix is not invertible, the [identity matrix](#) is returned.
