Propagate

Reference

Mode:
    Pose Mode
Menu:
    Pose ‣ Propagate
Shortcut:
    Alt - P

The Propagate tool copies the pose of the selected bones on the current frame over to the keyframes delimited by the *Termination Mode*. It automates the process of copying and pasting.

Termination Mode
    Modes which determine how it decides when to stop overwriting keyframes.

    To Next Keyframe
        Simply copies the pose to the first keyframe after (but not including any keyframe on) the current frame.

    To Last Keyframe
        Will simply replace the last keyframe (i.e. making action cyclic).

    Before Frame
        To all keyframes between current frame and the *End frame* option. This option is best suited for use from scripts due to the difficulties in setting this frame value, though it is possible to set this manually via the Adjust Last Operation panel if necessary.

    Before Last Keyframe
        To all keyframes from current frame until no more are found.

    On Selected Keyframes
        Will apply the pose of the selected bones to all selected keyframes.

    On Selected Markers
        To all keyframes occurring on frames with Scene Markers after the current frame.

End Frame
    Defines the upper-bound for the frame range within which keyframes will be affected (with the lower bound being the current frame).
