Mode:
> Edit Mode

Tool:
> Toolbar ‣ Extrude Individual

Menu:
> Face ‣ Extrude Individual Faces, Mesh ‣ Extrude ‣ Extrude Individual Faces

This tool allows you to extrude a selection of multiple faces as individuals, instead of as a region. The faces are extruded along their own normals, rather than their average. This has several consequences: first, "internal" edges (i.e. edges between two selected faces) are no longer deleted (the original faces are).

Selection of multiple faces.

Extruded using extrude region.

Extruded using Extrude Individual.
